

Rehabweek 2022

Rijndam Rehabilitation lab tour

Friday, 29 July 2022

Adress : Westersingel 300, 3015 LJ Rotterdam
Main attraction : Innovation market with guided tour
Time : 10.00 - 12.00 h

Introduction Rijndam Rehabilitation

About Rijndam Rehabilitation

Visit Rijndam, one of the largest rehabilitation hospitals in the Netherlands. We provide inpatient and outpatient care for children and adults with disabilities, medical complexity and those who require rehabilitation after illness or trauma. We work together with our patients, their families and our healthcare partners to improve functioning and quality of life. We focus on what really matters to our patients, helping them to achieve the maximum of their potential.

In order to provide this excellent care from 16 locations with 800 employees, Rijndam continuously invests in scientific research, innovations and education. Our research as well as our innovations are focused on three main spearheads: spinal cord injury, acquired brain injury and pediatric rehabilitation.

Research & Innovation

In the field of research, we work closely with the Erasmus University Medical Center. Led by the professor of Rehabilitation Medicine and in consultation with our medical staff, we build bridges between scientific research and patient care. Also our rehabilitation technology and innovations are positioned close to our patient care. For example Rijndam uses a 'living lab', a place for experimentation and innovation. The living lab offers students of the TU Delft and technology companies the opportunity to test their innovations together with end-users. Rijndam makes it possible to further develop innovations in a fully realistic rehabilitation process and environment.

For more information about Rijndam, please take a look at our website www.rijndam.nl

We invite you to register and join our Rehabweek 2022 lab tour on Friday 29 July 2022.

Lab tour: Innovation market with guided tours

Times: 10.00 - 12.00 h

Duration: 2 hours

Number of participants: 80 persons

This lab tour will take place at the main location of Rijndam Rehabilitation, where also our inpatient clinic is located. Use this opportunity to learn and network with the local experts.

Tour attendees will visit a specially organized innovation market. We will show and demonstrate our technologies and innovations that have been developed to support people recovering from and living with disabling injury or illness.

Extra options:

In addition to visiting the innovation market participants can register upon arrival for one of the two extra guided tours. These side tours take place during the innovation market and last about 25 minutes.

Rehabweek 2022 delegates can choose from the following two tours:

1) Guided tour of our rehabilitation hospital

Participants will learn how our inpatient and outpatient care is organized. The tour shows the most important and interesting facilities of our rehabilitation institute.

2) Guided tour of Rijndam Orthopaedic company

Participants will visit the Orthopaedic company, located within Rijndam Rehabilitation. The department has its own workplace where they produce tailor-made arm and leg prostheses and different types of orthoses (splints and braces). A combination of specialized doctors and practitioners, technicians and certified prosthetist and orthotist work with our patients to find the best suitable solutions for limitations caused by illness or accident.
